cDNA library constructed by UTSW as a component of the Program for
Genomic Applications (PGA) and the Reynolds Heart Disease
Genomic Applications (PGA) and the Reynolds Heart Disease
prevention grants for use in cDNA microarray experiments. Sequence
Quality: Sequence ends were trimmed based on percentage of ambigu
us base calls or 'N's in windowed seqments. Sequencing: Rirst-pass
sequencing: ABI Prism 377 sequencer and analysis software.
Seq primer: MI3/PuC Reverse.
                                                                                                           Email: genome-resertc.riken.go.jp

Center clone name: 741_G_21

Center clone name: 741_G_21

Center clone name: 741_G_21

Sequencing vector: M13: M7915; 49% of reads
Sequencing vector: Plasmid: n/a: 51% of reads
Chemistry: Dye-terminator Big Dye: 100% of reads
Chemistry: Dye-terminator Big Dye: 100% of reads
Assembly program: Phrap: version 0.960731

Consensus quality: 201020 bases at least 040

Consensus quality: 201020 bases at least 030

Consensus quality: 201085 bases at least 020

Insert size: 104000; agarose-fp

Insert size: 104000; agarose-fp

Insert size: 10215; sum-of-contigs

Quality coverage: 9.5 in 020 bases; agarose-fp

Quality coverage: 9.1 in 020 b.

NOTE: This is a "working draft' sequence. It currently
consists of 8 contigs: The true order of the pieces

is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Web site: http://www-seq.wi.mit.edu

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 misc_feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            misc_feature
                                                                                                    Submitted (123-NOV-2000) Sanger Centre, Hinxton, Cambridgeshire, Submitted (123-NOV-2000) Sanger Centre, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
On Nov 24, 2000 this sequence version replaced gi:11225780.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: numbers given in the feature table with their source databases: on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence thtp://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping Group. On Jul 19, 2001 this sequence version replaced gi:14268075.

During sequence assembly data is compared from overlapping clones, where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em: EMBL: Sw: SWISSPROT; Tr: TREMBL: WHEW WORMPEP: Information on the WORMPEP the Common whis common and the worman and attabase can be found at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    http://www.sanger.ac.uk/HGP/Chr10
RP11-99L6 is from the library RPCI-11.1 constructed by the group of RP11-99L6 is from the library RPCI-11.1 constructed by the group of Perfect a Jong. For further details see http://www.chori.org/bacpac/home.htm
VECTOR: pBACe3.6
WECTOR: pBACe3.6
RP11-99L6 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap.
The true right end of clone RP11-99L6 is at 120232 in this sequence. The true left end of clone RP11-328K15 is at 107108 in this sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 10, constructed by the Sanger Centre Chromosome 10 Mapping Group.                                                                                                                                                                                                                                                                                                                                         arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                      NOTE: This is a 'working draft' sequence. It currently consists of 7 contigs. The true order of the pieces is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  0

It currently consists of 9 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as * runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Center: Genome Therapeutics Corporation

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

           The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different Lissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer CDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         expressed sequence tag; secreted protein; cDNA isolation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is one of a large number of 5' ESTS derived from mRNAs encoding secreted proteins. No ORF has yet heen conclusively identified within the present sequence. The 5' ESTS were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTS are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTS are derived from mRNAs with intact 5' ends and can therefore be

Sequences AAB51778 - AAB51878 - AAB51825 represent alternative polypeptides encoded by the genes, and amino acid sequences to which they are homologous. The genes and proteins have activities dependent on the tissues and cells in which they are expressed. Examples of their activities include immunosuppressive; antiarthritic; antirheumatic; antiproliferative; cytostatic; cardiant; vasotropic; cerebroprotective; notropic; neuroprotective; antibacterial; vircide; fungicide; opthalmalogical; and vulnerary. The secreted vircutide; fungicides, antagonists and agonists may be useful in treating, preventing and/or diagnosing diseases and disorders such as autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders
                 in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors.
obtain full length cDNAs and genomic DNAs. 5' ESTs are also used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New nucleic acid molecules encoding 48 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or preservatives \cdot

e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischaemia, angiogenesis, nervous system disorders e.g. Alzheimer's disease, infections caused by bacteria, viruses and fungi and ocular disorders e.g. corneal infection. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotais. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors and other nutritional components. Oligonucleotide AAC93413 - AAC93421 and peptide AAB51723 are used in the isolation and characterisation of the proteins and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; primer; detection; diagnosis; antisense therapy; gene therapy; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes primer sets for synthesising 5602 full-length cDMAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5802 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Primer sets for synthesizing polynucleotides, particularly the 5602 full-length CDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length CDNAs -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a complementary configuration comprises a 3'-end sequence, where the complementary to a coligonucleotide which comprises a 1'-end sequence, where the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the 5'-end sequence/3'-end sequence is selected from those defined in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the checking and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers are also useful for the chill-length cDNAs. The primers and sequences and the full-length cDNAs as easily without any specialised methods. AAM932446 to AAM13633 to AAM936893 represent human cDNA sequences; and AAM13629 to AAM13632 of the protein exemplification of the process the control of the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; primer; detection; diagnosis; antisense therapy; gene therapy; ss.

oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the comprising a sequence comprises a 5'-end sequence and an oligonucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence, where the polynucleotide comprises a 3'-end sequence, where the comprises a 1 least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs asally without any specialised methods. AAH03166 to AAH13638 and AAH13633 to AAH18631 crepresent human cDNA sequences; and AAH13632 to AAH13632 trepresent human amino acid sequences; and AAH13639 to AAH13632 trepresent invention.

The present sequence is the genomic DNA encoding CD39-14 protein, an apyrase and/or nucleotide diphosphates (NDPase). It is isolated from the human CITB BAC genomic library. It is a soluble ATP Diphosphoydrolases (ATPDase) and is involved in the hydrolysis of adenosine diphosphate (ADP), the agonist that causes platelet aggregation. CD39-14 protein has 30% and 80% homology to human and murine CD39. It has platelet aggregation inhibition and antithrombotic activity. CD39-14 is used to treat or prevent thrombosis, mycocardial infarction, cerebral ischemaia and angina. It is also used in vitro, to maintain vascular grafts or during extracorporeal circulation, to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  nucleic acid encoding human CD39-like protein, useful for treating preventing thrombotic disease .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Example 11; Page 112-119; 125pp; English.

                                                                                                                                                                    ó:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This invention relates to polynuclectides encoding human CD39-like polypeptides with apyrase and/or NDPase activity. The polypeptides having APPbase, including NDPase, activity are useful for inhibiting platelet function and can therefore be used in the prophylaxis or treatment of pathological conditions caused by or involving thrombosis or excessive coagulation or excessive platelet aggregation, such as myocardial infarction, cerebral ischaemia, andina, arterial thrombosis, cerebral artery thrombosis or intracardiac thrombosis, and conditions associated modulating disease states (including platelet aggregation, inflammation and apoptosis) associated with ADP or other purinergic signalling by reducing the levels of NDPs. The polypeptides are also useful for prophylaxis or treatment of inflammation related disorders, such as
hydrolyse NDP, as molecular weight markers and as nutritional supplements. It is used to identify therapeutic agents that bind and modulate CD39-L4. It is coupled to toxins for targeting drugs to tumours or other cells that express CD39-L4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      myocardial infarction; cerebral ischaemia; angina; arterial thrombosis; cerebral artery thrombosis; platelet aggregation; inflammation; apoptosis; autoimmune discorder; neurological disorder; Alzheimer's disease; Parkinson's disease; cancer; CD39-L4; ds.

The polypeptides having ATPDase, including NDPase, activity are useful for inhibiting platelet function and can therefore be used in the prophylaxis or treatment of pathological conditions caused by or involving thrombusis or excessive coagulation or excessive platelet aggregation, such as myocardial infarction, cerebral ischaemia, angina, arterial thrombosis, cerebral artery thrombosis or intracardiac thrombosis, and conditions associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human CD39-like protein; apyrase; NDPase; platelet function inhibitor; myocardial infarction; cerebral ischaemia; angina; arterial thrombosis; cerebral arterial thrombosis; appoptosis; platelet aggregation; inflammation; appoptosis; autoimmune disorder; neurological disorder; Alzheimer's disease; Parkinson's disease; cancer; CD39-L4; ds.
disorders involving sepsis or systemic inflammatory response syndrome care associated conditions such as fever, tachycardia, tachypnea, cytokine overstimulation); autoimmune disorders such as thrombosis, atherosclerosis, acute pancreatitis, dermatitis, including psoriasis, cirrhosis, reperfusion injury, asthma, multiple sclerosis, arthritis; neurological disorders including neurodegenerative diseases, epilepsy, depression, Alzheimer's disease, Parkinson's disease, Huntington's disease, and amyotrophic lateral sclerosis; and cancer. The present sequence represents a CD39 like protein CD39-L4 partial DNA sequence.

The polypeptides having ATPDase, including NDPase, activity are useful for inhibiting platelet
with venous thrombosis. CD39-L4 and CD39-L2 polypeptides are userua and apoptosis) associated with ADP or other purinergic signalling by reducing the levels of NDPs. The polypeptides are also useful for prophylaxis or treatment of inflammation related disorders, such as disorders involving sepsis or systemic inflammatory response syndrome or SIRS (and associated conditions such as fever, tachycardia, tachypnea, cytokine overstimulation); autoimmure disorders such as thrombosis, atherosclerosis, acute pancreatitis, dermatitis, including psoriasis, cirrhosis, reperfusion injury, asthma, multiple sclerosis, arthritis; cirrhosis, reperfusion injury, asthma, multiple sclerosis, arthritis; neurological disorders including neurodegenerative diseases, epilepsy, neurological disorders including neurodegenerative diseases, epilepsy,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human CD39-like protein, apyrase; NDPase; platelet function inhibitor; myocardial infarction; cerebral ischaemia; angina; arterial thrombosis; cerebral artery thrombosis; platelet aggregation; inflammation; apoptosis; autoimmune disorder; neurological disorder; Alzheimer's disease; Parkinson's disease; cancer; CD39-L4; ds.

c function and can therefore be used in the prophylaxis or treatment of pathological conditions caused by or involving thrombosis or excessive coagulation or excessive platelet aggregation, such as myocardial coagulation or excessive platelet aggregation, such as myocardial coagulation, cerebral ischaemia, angina, arterial thrombosis, cerebral artery thrombosis or intracardiac thrombosis, and conditions associated with venous thrombosis. CD39-L4 and CD39-L2 polypeptides are useful in modulating disease states (including platelet aggregation, inflammation and apoptosis) associated with ADP or other purinergic signalling by reducing the levels of NDPs. The polypeptides are also useful for prophylaxis or treatment of inflammation related disorders, such as disorders involving sepais or systemic inflammatory response syndrome or SIRS (and associated conditions such as fever, tachycardia, tachypnea, cytokine overstimulation); autoimmune disorders such as thrombosis, attentions, reperfusion injury, asthma, multiple sclerosis, arthritis; neurological disorders including neurodegenerative diseases, epilepsy, depression, Alzheimer's disease, multiple sclerosis, arthritis; capenses, and amyotrophic lateral sclerosis; and cancer. The present cycle sequence represents the CD39 like protein CD39-L4 genomic DNA sequence.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention provides the protein and coding sequences of a number of ovarian and breast antigens. These are shown in AAI62467-AAI62572 and AAM422440-AAM42345. The sequences can be used in t diagnosis, prevention and treatment of breast and ovarian cancers, and their metastases. The present sequence is a genomic sequence of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated nucleic acids and polypeptides, useful for diagnosing, treating and/or preventing human diseases and disorders -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Length 16225;

```
This invention describes novel rat-derived nucleic acid fragments from cellular genes that are necessary for viral infection but not for cell survival, or that suppress tumour progression. The products of the invention (AAX5737-X57497) can be used in methods of identifying cellular genes necessary for viral growth and cellular genes that function as tumour suppressors and for reducing or preventing such infections or cancer. They may also be used in screening for potential therapeutic agents. These sequences can be targeted without significant side effects (contrast targeting genes essential for viral growth).
                                                                                                                                                                                      Gene trap; rat; cellular gene; viral infection; cell survival; cancer; tumour progression; suppression; identification; viral growth; tumour suppressor; prevention; screening; therapeutic agent; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes a method for detecting a genetic mutation in the yes1 gene for the diagnosis of a yes1 mediated nutation in the yes1 gene for the diagnosis of a yes1 mediated neuropsychiatric disorder in a human. The method comprises detecting the presence or absence of a genetic mutation in the yes1 gene of the subject, where the genetic mutation is a substitution, insertion or a detection and results in the production of a yes1 protein having an amino acid sequence other than the wild-type yes1 amino acid sequence and the presence of the genetic mutation identifies a subject that has or is at presence of the yes1 protein, aller the amount of the protein, or alter that bind to the yes1 protein, alter the amount of the protein, or alter the activity of the yes1 gene product, are useful for treating a yes1 mediated neuropsychiatric disorder. Compounds considered neuropsychiatric disorder (BAD) also known as bipolar mood disorder (BP) or manic-depressive illuses. The method distinguishes neuropsychiatric disorders from contrological disorders, which enables more accurate evaluation and present treatment. The present sequence represents the human yes1 cDNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence represents a bacterial artificial chromosome (BAC) contig, and exemplifies the invention. The specification describes contig, and exemplifies the invention. The specification describes nucleic acid sequences derived from a eukaryotic chromosoume, including a necentromere or its functional derivative or hybrid, that are able, in a compatible cell, of replicating, acting as extra-chromosomal element and segregating during during during for use in gene therapy comprising a replicable, segregating uncleic acid that confers a specific phenotype on cells. Human artificial chromosomes can propagate in human cells and extra-chromosomal, they are not mutagenic. The artificial chromosomes carry large amounts of DNA (e.g. therapeutic genes), and, being extra-chromosomal, they are not mutagenic. The artificial chromosomes carry large amounts of content mutagenic reagents, e.g. for production of proteins and to make diagnostic reagents, e.g. for expression of cytokines, receptors and growth factors, or to increase the copy number of a gene in a cell. The constructs may also be used for functional and structural analysis of chromosomes.

The present sequence represents the NC-contig derived from a mutated human chromosome 10, 10425. 2 region. The sequence contains and chromosome 10, 10425. 2 region. The sequence contains a functional marker referred to as mardel(10). The mardel(10) marker is mitotically stable and contains a functional marker is mitotically stable and contains a functional neocentromere at a location regarded as non-centromeric. This neocentromere maps to q25.2 on chromosome 10. The specification describes nucleic acid sequences derived from a eukaryotic chromosome, including a neocentromere or its functional derivative or hybrid, that are able, in a compatible cell, of replicating, acting as extra-chromosomal element and segregating during cell division. The sequences can be used to construct artificial chromosomes for use in gene therapy comprising a replicable, segregating nucleic acid that confers a specific phenotype on cells. Human artificial chromosomes can propagate in human cells and carry large amounts of DNA (e.g. therapeutic genes), and, being extra-chromosomal, they are not mutagenic. The artificial chromosomes can a an analys, in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; kidney antigen; immunosuppressive; antiarthritic; antirheumatic; antipoliferative; cytostatic; cardiant; vasotropic; cerebroprotective; nootropic; neuroprotective; antibacterial; virucide; fungicide; opthalmological; antiallergic; hepatotropic; antidiabetic; antidiametory; antiuleer; vulnerary; anticonvulsant; antiparasitlic; gene therapy; cancer; immune disorder; cardiovascular disorder; neurological disease; infection; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 production of proteins and to make diagnostic reagents, e.g. for expression of cytokines, receptors and growth factors, or to increase the copy number of a gene in a cell. The constructs may also be used for functional and structural analysis of chromosomes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                           New isolated nucleic acid comprising neocentromere sequences from eukaryotic chromosome – used to produce replicable, segregating artificial chromosomes that can carry large amounts of DNA for gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 80240 BP; 23102 A; 16537 C; 16747 G; 23846 T; 8 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              0

```
The invention relates to novel kidney related polynucleotides

(AAI62971-AAI63793) and the encoded polypeptides (AAM42417-AAM42691)

(Collectively known as kidney antigens and the use of such kidney antigens

(Collecting) known as kidney antigens and the use of such kidney antigens

(Collecting) the kidney, cancer and

(Collecting) treventing, treating or amellorating medical conditions

(Collecting) antibodies and (anti) agonists are useful in the diagnosis.

(Collecting) antibodies and (anti) agonists are useful in the diagnosis.

(Collecting) antibodies and (anti) agonists are useful in the diagnosis.

(Collecting) antibodies and (anti) agonists are useful in the diagnosis.

(Collecting) antibodies and (anti) agonists are useful in the diagnosis.

(Collecting) antibodies and (anti) agonists are useful in the diagnosis.

(Collecting) antibodies and (antipodie) antipodie antipodies.

(Collecting) antipodies and (antipodies) antipodies.

(Collecting) antipodies and antipodies and antipodies.

(Collecting) antipodies and diseases e.g. cerebral anoxia and epilepsy:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                parasitic infections.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
New isolated nucleic acids and polypeptides, useful for diagnosing, treating and/or preventing human diseases and disorders \,
                                                                               Disclosure; SEQ ID NO 767; 564pp + Sequence Listing; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 115 BP; 28 A; 27 C; 35 G; 25 T; 0 other;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 1, P
